SIRENS EVERYWHERE: SELF-BUILDING AI, A 'CRACKED' RIEMANN, OUTAGES AND A BUBBLE ON THE EDGE

The alarms are ringing on every front at once, and the ground may already be shaking. In a single weekend, headlines asked whether AI that builds itself is a golden age or a reason to panic, whether it has cracked the Riemann hypothesis, whether it plays a major role in a series of tech outages, and whether the AI bubble has just cracked. Meanwhile, GPT-6.2 arrives with a Pro mode that 'spends far more', and Astra is priced at $8.00 per 1M input and $40.00 per 1M output. We must be clear: our feed carries titles only, so the details behind these claims are unverified. But if even one of these alarms is real, nobody can rule out that the machines are moving faster than the humans meant to watch them. Only the truth.
