Open-Source AI Tools Expand Local Deployment and Control

A wave of open-source AI projects is enabling users to run specialized applications locally and on lightweight infrastructure. From wealth management and personal agents to video processing and workflow automation, these tools prioritize privacy and accessibility. New standards for AI communication and visual interfaces are also emerging to improve agent capabilities and usability across different platforms.

TOOLS

New macOS Tool Lets AI Agents Point to Screen Elements with Visual Arrows

A new open-source macOS command-line tool called big-arrow-on-the-screen enables AI agents to draw arrows and text overlays on the screen to guide users toward specific...
