THE DAY AFTER IS COMING: AI Giants Brace for Cyber Doomsday as Cheap Agents Flood the World

This week, the people building the most powerful AI on Earth are reportedly planning in private for the fallout of a significant AI cyberattack, according to Axios relayed by CBS News. Meanwhile, the machines keep multiplying: Claude Haiku 5.5 lands at $0.10 per 1M input tokens, and StepFun's Step 5 Preview offers a 1000000-token context for $1.00 per 1M input tokens. Unconfirmed reports whisper of Qwen self-improvement experiments, a secret Google model called CARBON, and a Microsoft system said to decide 35 times faster than GPT-6 Sol. None of the rumors is verified, and no attack is said to be imminent, but nobody can rule out that the race is outrunning every brake. If the plan is written behind closed doors while the agents spread, who is left in control? Only the truth.
